DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Dougherty (Reg#19,576) on 1/31/2008 and 2/20/2008.

IN THE ABSTRACT

A sterilized safety syringe ~~comprises~~ including a syringe tube, a protective cover, a sterilizer, and an air compressor. The protective cover is slid into a guide slot of the syringe tube with several sliding plates whose rear ends are ~~closely in~~ are in close contact with the wall of the guide slot ~~with their annular flanges~~. The syringe tube ~~are~~ is equipped with several air conducting pipes which are connected with corresponding air feeding pipes of the ~~an~~ air compressor. A plug is formed at the rear end of the sterilizer ~~to be~~ which is plugged into a drilled hole formed on the protective cover. ~~Due to existence of perfectly effective sterilizer, the medical staffs never have to worry about infectant contamination brought about from inadvertent contact with the patient body fluid.~~

(Figs.1, 2)

IN THE SPECIFICATION

Fig. 40A is a three dimensional perspective view of an alternative embodiment of Figure 40.

IN THE CLAIMS

1. (Currently Amended) A sterilized safety syringe which is ~~communicated~~ coupled with an air compressor using air feeding pipes for infusing drugs into the patient's body or extracting ~~the body fluid~~ therefrom, ~~essentially~~ comprising:

a syringe tube having a tip, an inner ~~part wall~~, an outer surface and an injection needle inserted at said tip, the inner ~~part wall~~ of said tube defining a cavity and a guide slot formed between the outer surface and the inner ~~part wall~~ of said syringe tube, said guide slot passing through ~~the~~ a front wall surface of said syringe tube, and having a protrusion at ~~its~~ a front end thereof,

a plunger provided in said cavity and in close contact with the inner wall surface of said cavity, a rear end of said syringe tube being in a sealed state wherein said cavity and said guide slot are ~~communicated~~ coupled with a plurality of air feeding pipes of said air compressor via an air conducting pipe;

a protective cover having a drilled hole at ~~its~~ a front end thereof and the protective cover provided with a sliding plate at ~~it's~~ a rear end thereof, said sliding plate provided with a fixed part at ~~is~~ a front portion thereof and an annular flange at its rear end; wherein said annular flange has a check fitting formed at ~~its~~ a front edge and wherein said protective cover is actuated by said air compressor via one of said air conducting pipes;

a sterilizer ~~has~~ having a main body with a pallet formed at ~~the~~ a front end ~~of its main body~~ thereof, and a sterilized cotton swab being affixed to said pallet, a film formed at the front end of said main body being for sealing said pallet, while ~~the~~ a rear end of said main body ~~being formed into~~ forms a plug; wherein

Art Unit: 3763

said sliding plate of said protective cover is fitted into said guide slot ~~Of~~ of said syringe tube and ~~being is~~ is forcibly in close contact with ~~the a~~ a wall of said guide slot with said annular flange; wherein said plug formed at the rear end of said sterilizer is plugged into said drilled hole of said protective cover.

Claims 4-58 (Cancelled)***Allowable Subject Matter***

Claims 1 and 3 are allowed over the prior art of record as amended in the reply filed 11/05/2007 and the Examiner's answer above.

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed device of a sterilizing safety syringe with syringe tube that incorporates a pneumatically powered piston and protective cover that contains a sterilization element at a distal end thereof, with the piston and cover actuating via air an air compressor through air conducting pipes with a guide slot formed within the syringe tube and the protective cover moving within the guide slot .

The closest prior art of record is Kleinwolterink et al. (USPN5,015,237), Gagnieux et al. (USPN6,679,035) and Barrett (USPN4,243,035), however these references do not disclose the device as claimed or described above.

Regarding claim 1, the closest prior art of record fails to teach among all the limitations or render obvious the protective cover element that moves within a guide slot under air pressure for sterilization of the distal end of the syringe.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
